

Aspera Services Offerings

PacGenesis is now offering specific Aspera solutions based on customer demand and the complexity of long term customer deployments of Aspera. With the recent modernization of the Aspera web apps, there is an increased need to migrate to Faspex 5 and Aspera on Cloud. Contact us to leverage our experience and expertise in helping you solve your file transfer needs while minimizing risk.

Faspex 4 to Faspex 5 Migration

Discover

Evaluation of your existing Faspex 4 environment. This stage will include activities to help us plan and implement a seamless upgrade while mitigating risk.

Design

Architect new hardware/software requirements. Best practices for implementing a hardened and scalable Faspex 5 environment for your production file transfer needs.

Implement

Hands on Operating System tuning and Application Installation and Migration. This includes training and documentation as deliverables.

Aspera Managed Services

Discover

This stage will include an analysis of your business workflows with the goal of establishing a partnership for solving all of your current and future file transfer needs.

Design

We will deliver an architecture diagram including machine specs, storage needs, and network topology. We will assist with procuring any on-premises hardware or provisioning cloud infrastructure.

Implement

We will manage your environment in your datacenter or your cloud environment according to a mutually agreed upon SLA.

Automated HSTS Installation

Discover

This stage will include an analysis of your business workflows with the goal of establishing a partnership for solving all of your current and future file transfer needs.

Design

We will deliver an architecture diagram including machine specs, storage needs, and network topology. We will assist with procuring any on-premises hardware or provisioning cloud infrastructure.

Implement

We will deploy our automated installation scripts to ensure hardened and tuned infrastructure, as well as best practice implementations of the Aspera HSTS Software.

Shares to AOC Migration

Discover

Evaluation of your existing Aspera Shares environment to understand the complexity and how to map your workflows to the Files application within Aspera on Cloud.

Design

Architect a solution in the AOC Files application that will enable your existing Aspera Shares workflows.

Implement

Migrate nodes and shares from Aspera Shares to Aspera on Cloud Files. This includes mapping your existing permissions structure to AOC and hand over documentation and training.

SMB

Whether you're a small or midsize business, Aspera offers a complete portfolio of software products and technologies that help your organization reach the highest level of performance for every file transfer use case.

Enterprise

For larger businesses, Aspera is built with extreme performance and scalability in mind. Coupled with high-speed FASP transport and a powerful security model, it's the perfect solution for ingesting, sharing, and managing data distributed across public or private enterprise storage.

What You Get

Automate Files

Aspera's high-speed transfer and automation platform allows businesses to manage and automate file movement from simple tasks to the most complex workflows.

World-Wide Distribution

No matter the geographic location of customers and partners, Aspera software distributes file-based assets of any size without compromising performance or security.

Collaborate Securely

Aspera's file transfer solutions provide organizations with intuitive, secure, and efficient paradigms to exchange files and directories.

Scale Synchronization

Aspera Sync overcomes the bottlenecks of conventional sync tools and scales up for maximum speed replication and synchronization over WANs.
