

Fast and Secure File Transfer with IBM Aspera and Trend Micro Vision One™ File Security

ALL
REGIONS

Supported for
AWS, Google
And Azure

100 TB
IN 24 HOURS

Transferred to
the Cloud over
a 10Gbps line

MILLIONS OF
FILES
transferred with ease and speed

Key Capabilities and Features

- Instant access to the industry leading cloud providers
- End-to-end security that protects data throughout the process
- Scalable, reliable and ultra-fast data transfer to cloud object storage and elastic block storage
- Secure and scan incoming assets with Trend Micro Vision One File Security instantaneously on ingest to the cloud
- Easy automated deployment in minutes

PacGenesis is the Premier Partner for IBM Aspera software, which overcomes the challenges of moving your data to the cloud. Traditional transfer software technologies are slow and unreliable, and shipping physical disk storage is time consuming and exposes your data to unnecessary security risks. Aspera offers high-speed data transfer that uses the public internet to securely and reliably transfer and migrate large amounts of data to, from, or between any major cloud.

Dramatic increase in Speed - Ingest 100TB in 24 hours

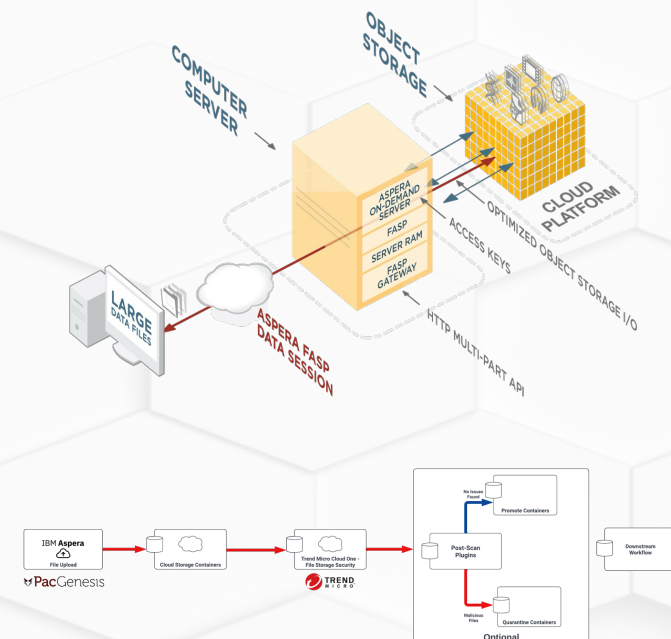

Aspera offers unrivaled performance for transferring large files and large collections of files across any distance to, from or between clouds. Over a 10Gbps network, organizations can move 100TB in 24 hours regardless of round-trip delay or packet loss. Aspera's clustering technology means that this number scales linearly with available bandwidth. Any File Size. Any Network. Any Storage.

Lower your transfer costs using a streamlined direct-to-cloud transfer

Aspera's direct-to-cloud transport technology moves data from the client all the way into the cloud storage layer, with no stop-offs in between. A single data transfer session allows Aspera to consistently deliver high speeds along the entire data path.

Eliminate risk with high-speed transfer combined with comprehensive file scanning

Enterprise-grade security protects valuable data during the entire transfer. With Trend Micro Vision One File Security, incoming objects to cloud storage will be automatically scanned for malware and viruses and quarantined if needed. The entire ingest process is secured in session and at the file level.
